'Dinosaurs' Of The Deep: Discover Prehistoric Marine Life

Synopsis

Driving across the North American Heartland, surrounded by prairie, it is almost impossible to imagine that once this was once a huge inland sea. The Western Interior Seaway, which split the entire continent of North America in half, once teemed with predatory creatures - fanged fish and turtles the size of small cars; prowling sharks and giant squid; hungry plesiosaurs and immense crocodiles. At the top of this prehistoric food chain, stretching up to nearly 15 metres (50 feet) and weighing a hefty 50,000 kilograms (50 tonnes), ruled the mighty mosasaur, the T-Rex of the sea. Through a cooperative partnership with the Canadian Fossil Discovery Centre (CFDC), home to 'Bruce', the world's largest mosasaur skeleton, author Larry Verstraete and illustrator Julius Csotonyi combine fascinating facts, astonishing discoveries, and the latest paleontological information to bring the ancient marine creatures of the Seaway to vivid life.

Book Information

Hardcover: 79 pages

Publisher: Turnstone Press (June 30, 2016)

Language: English

ISBN-10: 0888015739

ISBN-13: 978-0888015730

Product Dimensions: 9.2 x 0.5 x 8.1 inches

Customer Reviews

Writer and educator Larry Verstraete is the award-winning author of 13 books of non-fiction, many of which focus on scientific or historical themes. An active promoter of literacy, Larry is a frequent visitor to schools and libraries where he shares his enthusiasm for science, history, and writing with students, teachers and parents. Larry Verstraete lives and writes in Winnipeg, Manitoba.

This book ties in perfectly with the blockbuster exhibit at the South Carolina State Museum, "Savage Ancient Seas." There are a lot of books and other educational materials about dinosaurs, but these marine reptiles get much less attention. The book gives examples of the major species in the Western Inland Sea that covered much of what is now the Midwestern and Western United States.

Also, the authors provide background material about the various epochs and ages during which marine life evolved and the methods of discovering and interpreting fossilized animals. I recommend it for students and those who want to learn about the creatures that inhabited Kansas, Colorado, and other plains states.

This was a gift for a 10 year old boy, who is interested in dinosaurs. He now has quite a collection of books.
