Four Views On Free Will

Synopsis

Focusing on the concepts and interactions of free will, moral responsibility, and determinism, this text represents the most up-to-date account of the four major positions in the free will debate. Four serious and well-known philosophers explore the opposing viewpoints of libertarianism, compatibilism, hard incompatibilism, and revisionism. The first half of the book contains each philosopher's explanation of his particular view; the second half allows them to directly respond to each other's arguments, in a lively and engaging conversation. Offers the reader a one of a kind, interactive discussion. Forms part of the acclaimed Great Debates in Philosophy series.

"This book presents four recent positions on free will in a clear and accessible way, along with their authors' responses to each other's position." (Metaphilosophy, January 2009) "There is no better introduction to the debate available. This is a book that will be read with profit by anyone who opens it, specialist or newcomer." Neil Levy, Metapsychology Online Reviews "Four Views on Free Will is an excellent introduction to the current debate regarding one of the most seductive of the perennial topics in philosophy. It is an especially welcome addition to Blackwell's "Great Debates in Philosophy" series. The goal is the presentation of a considerably more dialogical and engaging introduction to the main issues in an important domain of philosophical inquiry than can typically be achieved in a standard monograph. Four Views succeeds admirably in achieving this worthwhile

goal." Daniel Speak, Notre Dame Philosophical Reviews "This gem of a book provides a wonderfully accessible introduction to the free will debate by leading proponents of four major views, as well as a front row seat to a dynamic, up-to-the minute philosophical conversation." Dana Nelkin, University of California at San Diego "This four-way debate is a fine addition to the Great Debates in Philosophy series. Four Views on Free Will is ideal for advanced undergraduate courses on free will." Alfred R. Mele, Florida State University "The four main essays are clearly written and argued, and the shorter articles are very useful as illustrations of how philosophers debate. Highly recommended." This slim volume serves as a fantastic introduction to the problems in philosophy on the subject of free will. What is unique about this book is that it gives equal weight to four different theories: libertarianism, compatibilism, incompatibilism, and revisionism. These are hardly the only four theories out there, but they are definitely the most important and the most seriously considered options. After the four theorists are done laying out their case for their preferred view, there are chapters where each philosopher responds to the claims the others have made. This structure is important because it enables the reader to understand why a philosopher might believe a certain view without the reader himself believing it. This knowledgeable stance is vital to communicating the problems of moral responsibility and free will in an academic setting.

Each of the four essays primary essays in this book provide very clear and concise introductions to their respective views of free will. The essays are written so as to be quite approachable to those who are not well-steeped in the contemporary free will debates; and it is also quite useful for those who do study free will, in that it provides a cursory overview of the key points of each view. This book would be perfect for an upper-division Metaphysics course, which covers free will and moral responsibility. Highly recommended.

There are fascinating philosophical views and counter views, ontological arguments, and analogies given by some really gifted minds. This book is a solid read and greatly engaging. At times it gets lost in its weeds when presenting compatibilism and its subgroups but there is also a huge lack of Scriptural reference and interaction. I would recommend this book only after reading Crosspoints (Zondervan) book on Divine Providence.

This book is a fabulous intro to the topic of free will. It shouldn't be too difficult a read for most and gives a great overview of the arguments for each position. Also, it introduces many of the same ideas that a basic intro book would, but in the context of argument, which can make it more interesting for those more well versed in philosophy.

One of my favorite books. It helped me to define my beliefs. Additionally, it gave me argumentative strength in debates with my philosophy professor. Particularly, the book was crucial in my defending an opposing view to that of my professor who tried to convince the whole class an entire semester that free will did not exist.

Great introduction by four of the top philosophers working on free will. Although it would probably help to have an introductory philosophy class under your belt, the authors do a wonderful job of explaining their views in a jargon-free and accessible way. Each participant explores what they take to be the main source of conflict in the free will debate, then go on to explain why their particular view is the most plausible. I would recommend Robert Kane's "A Contemporary Introduction to Free Will" first to get a solid introduction to the debate, then dive into this book.

I agree with all the comments regarding this book. It is a great door to enter through when beginning one's journey into the understanding of the debate on freewill. However, in my opinion, the most

important view is by Professor Vargas, whom does not list as an author. He is the author of the section on revisionism, and has an entirely fresh take on moral responsibility.5 stars.

David Bohm in his "Causality and Chance in Modern Physics" indicated a fifth view of free will, and it is simply expressed:The Laws of Physics, such as gravity or the Laws of Dynamics, provide physical parameters in which free will operates ACCORDING TO ITS OWN LAWS.He gives this example:"If we wish to fly, what we must do is to have a deeper and more accurate conception of the laws of Dynamics; and on the basis of this construct suitable devices such as aeroplanes, dirigibles, rockets, etc."Thus, in the last analysis, the laws of nature do not depend on how we think about,or on WHAT WE CHOOSE TO DO, but our actions must be guided by correct conceptions of these laws if they are to lead to the results that we aim for."The other four views seem to be without demonstrations ad experimentum, and appear to be the mere juggling of concepts without any experimental foundation, and are not science but philosophical theory.Father Clifford StevensBoys Town, Nebraska
