Age Range: 8 - 12 years

Grade Level: 3 - 7

## Customer Reviews

Grade 5-9-This overview covers a lot of territory-from primordial slime to the apes that were our relatives-presented as a browsing collection of pictures and captions. Photos and illustrations of fossils, prehistoric plants, animals, and dinosaurs are prolific and colorful. While all are clearly reproduced, it is sometimes frustrating to see fossilized remains without seeing the creature depicted as it was in real life. Many of the drawings are out-of-date, reproduced most probably from copyright free material, and they do not always reflect contemporary theories about life on Earth. An adequate flip-through trip to the past, but not a reference source. Cathryn A. Camper, Minneapolis

These books' striking visual impact will draw in even the most casual readers. [Eyewitness series] --  
School Library Journal --This text refers to an out of print or unavailable edition of this title.

This is a great addition to our school library.It was just as described and arrived very quickly.Thank  
You for your outstanding service.

Prehistory spans a time of billions of years. Prehistoric life spans a time of hundreds of millions of  
years. This book is less than 70 pages long. How can you possibly fit hundreds of millions of years  
of content into so few pages? It is a good beginner book for kids, but, anyones quest for prehistoric  
knowledge should not end here.

This is great for my future paleontologist 8 year old great grandson!

Since I told at previously, books like this suit very well in children or teenagers, although the quality  
of illustrations are superb.

My daughter loves these series of books!!!!She asks for them as gifts and rewards!!!!Love all the  
variety of topics!!!

My son loves prehistoric animals and we thought this would be a great factual book for him.It  
focuses on a lot of general prehistoric era facts and not necessarily on the animals themselves.We  
returned this book because it is great for older kids (8 plus years old).Generally, it has been difficult  
finding factual prehistoric books for the 4-6 age range.

More about fossils than about the actual animals. Not what I was hoping for. Somewhat  
disorganized structure to the book.

This is a great series for kids, grandson and I read together, he borrows the books ad takes them  
home.
