Motivation: Biological, Psychological, And Environmental

Synopsis

This book provides a complete overview of motivation and emotion. Well-grounded in the history of the field, the fourth edition of *Motivation: Biological, Psychological, and Environmental* combines classic studies with current research. The text provides an overarching organizational scheme of how motivation (the inducement of action, feelings, and thought) leads to behavior from physiological, psychological, and environmental sources. The material draws on topics that are familiar to students while maintaining a conversational tone to sustain student interest.

Customer Reviews

Lambert Deckers is a professor of psychological science at Ball State University in Muncie, Indiana. He teaches courses mainly in motivation & emotion, psychology of learning, and history and systems of psychology. Professor Deckers is a charter member of the Association for Psychological Science and has conducted research in the psychology of humor in the United States and Germany.

This is a textbook for a Motivational Psychology course I am enrolled in. The textbook is decent and has been recently updated. I have noticed a few spelling and grammar errors that were likely due to spell check being utilized instead of a human editor. Some of the studies are a bit dated, and due to that, new research is emerging now that contradicts some of the material in the textbook, but this is fairly normal due to the nature of the discipline. In some of the chapters, the author can be long

winded, especially in instances where he breaks down a topic and presents several studies that suggest the same information. Overall though, it is a well-written and easy to understand book with lots of empirical research to back up topics. The subject is rather interesting as well, which helps to keep the reader engaged. I would suggest this text to educators or students who need resources or background information.

Fast Shipping. Excellent quality product. Highly Recommend.

Great product!

great

Great book on breaking down human motivation.

If it was less expensive I would actually keep this book as a reference guide. I need it for a class and it is costly even to rent. Definitely unnecessary in today's digital era to pay lots of money for a book when the course is \$1300.00

Rented this book for a class in undergrad. Some parts of it were very interesting to read and went into depth on the topic. Very helpful to understand motivation.

the book is in great condition
